Target version:		Spent time:	15.00 hours
Branch:		OS:	
Description			
Pretty often, the Testing Suit crashes while running jcom.delay~. I am wondering if there is something fishy with our delay implementation.

Nils:

What tests are you running? Can you confirm whether or not the recent updates have closed this ticket?

I have a new ruby test here:

<https://github.com/jamoma/JamomaCore/blob/6e3432fba2a2d2fd4f04532eb0272266c78c4b6c/DSP/library/tests/TTDelay.test.cpp>

The last one will fail because we need to resolve #1253.

Hi Nathan,

AFAIR I was running the entire test suite from the terminal in the Tools folder via ./test.sh
But it seems that the ./testrunner.rb script is broken at the moment :(
