<b>Description</b>			
<p>As I more and more patch using .model than modules, I found myself trying to declare my model's parameters value as attributes. I feel it could be convenient if one could do:</p> <pre>[blabla.model @my/parameter1 val @my/parameter2 val]</pre> <p>I guess I'd mostly use such a workflow to define default values for a particular model, hence I'd need to address only the value attribute of my parameters but I think Théo told me the mechanism would work for all parameters' attributes (not only value)</p>

Of course, i meant:

```
[blabla.model name @my/parameter1 val @my/parameter2 val]
```
