Description			
<p>When selecting "Store as next" from jcom.ui menu, no dialog window is opened to set a name for the preset and a preset is created with the name "Store as next". Selecting this preset stores a new preset named "Store as next". And so one.</p> <p>Expected behaviour: select "Store as next" pop a window up to set a name for the preset, just like when sending to jcom.hub '/preset/storenext'.</p> <p>(sending '/preset/storenext' works fine)</p>			

History

#1 - 2010-09-27 09:36 pm - Diemo Schwarz

- Due date set to 2010-09-30
- Status changed from New to Assigned
- Assignee set to Diemo Schwarz
- % Done changed from 0 to 10
- Estimated time set to 1.00

Bug tracked down, but not fixed yet

The reason for this bug is because I extended (with everyone's consent) the '/preset/storenext' message by an optional parameter to give the name right away.

Unfortunately, jcom.ui seems to send the menu entry's name as argument to the message, so no dialog box appears.

Proposed fix: don't send this argument.

#2 - 2010-09-30 04:10 pm - Diemo Schwarz

- Status changed from Assigned to Resolved
- % Done changed from 10 to 100

fixed with commit 9bcd0a6b781187388b53

#3 - 2011-07-19 05:01 am - Nils Peters

- Status changed from Resolved to Closed
