Description

When I send the message "content" to the jcom.hub, I would like that the output is sorted by priority.

Hey!

Cause for celebration... This is my FIRST feature request!

In working with jcom.hub, I would really like and extension to the "content" message which can separate "parameter", "message" and "return". Don't know if it should be an argument to "content" or after a slash or a colon, but I do know that I want to be able to separate the different types coming out of a jcom.hub.

more soon!

- Status changed from Assigned to Resolved

Is the new jcom.namespace features cannot be used to do this ?

if you add a [jcom.namespace @relative 1 @criterias parameter] you would have all the parameter of your model

By this way the "content" attribute could be removed from the hub because it is not very user friendly
and a patcher component (a jcom.content ?) could be added in order to provide a simple way to do this.

any opinions ?

I agree with Théo

Concerning Tom's feature, I guess that now this can be monitored with the activity attributes (using jcom.receive e.g.) (see below) and then sorted with some patcher using jcom.namespace...

So I guess this issue could be closed... Renaud ? Tom ?
