Target version:	MVC for 0.6	Spent time:	0.00 hour
Branch:			
Description			
when enable 0 is sent to jcom.map its functioning should stop completely - including "listening".			
Also, there should be a message "reset" that gets it back to the creation state.			
Thank you, and have a nice.day

| when enable 0 is sent to jcom.map its functioning should stop completely - including "listening".

This apparently works now...

| Also, there should be a message "reset" that gets it back to the creation state.

What would this actually do ?

Reset jcom.map to the values of its attributes ?

I'm not certain this is feasible at all... Théo ?

I'm setting this issue to resolved, unless you give some precisions to what you expect from resetting, Tom...

- Status changed from Resolved to New

My guess is that Tom would like the reset message to bring jcom.map back to the initial state: Initial mapping function and initial parameter values for that mapping function.

I'm swapping the status back to New

the reset message is done now !

see in jcom.map.maxhelp
