I think we should get this done sooner than later because I think it is a bad idea to accidentally ship JamomaArea51.dylib with any installer.

- Branch set to master

Hi,

I'm doing a Jamoma spatialisation workshop Friday, and was planning on creating an installer for it to get the most recent improvements to AudioGraph performance. Is that a problem? I guess it's really difficult for Tim to attend to this until Max 6 is out and he has catches some sleep.

It might well be that Area51 is included in one or two of the latest beta/rc installers already.

Best,

Trond

looking at the code of installer.rb we don't include JamomaArea51.dylib in the installer.
